DETAILED ACTION

Response to Amendment

1. The following is a response to the amendment filed on March 7, 2005.

Conclusion

2. This application is in condition for allowance except for the following formal matters:

Claim Objections

3. Claims 1, 2 and 5 are objected to because of the following informalities:

- Claims 1 and 2, line 6, "an practical" should be "a practical".
- Claim 5, line 12, "capacity is larger" should be "capacity is smaller".
- Claim 5, line 15, "capacity is smaller" should be "capacity is larger".

Appropriate correction is required.

Prosecution on the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

A shortened statutory period for reply to this action is set to expire **TWO MONTHS** from the mailing date of this letter.

4. Claims 1-8 are allowed.
5. The following is an examiner's statement of reasons for allowance:

The claims 1-8 are allowable over the prior art of record since the cited reference taken individually or in combination fail to teach or fairly suggest the steps of

"transmitting a transmission capacity demanding a signal from said radio base station to a relay station and from said relay station to a mobile switching station" and "a relay station wherein said transmission capacity demanding signal is received from a radio base station to change said permissible transmission capacity set up inside the station in said every call to control the transmission speed of said data in said wired line so to be equal to or less than said permissible capacity and at the same time, to transmit the transmission capacity demanding signal" as recited in claims 1, 2, 4 and 5. It is noted that the closest prior art, Xu et al. (US Patent No. 6,501,732), teaches a system and method for controlling the flow of data from a data network to a mobile user over a wireless link. However, Xu does not teach the method for controlling the transmission speed / capacity in wired line based on the demanding signal received from the wireless link via a relay station as recited in claims 1, 2, 4 and 5.
